

AGI BINMANAGER®

MAXIMIZE PROFIT

Keep your grain in peak condition to ensure you capture maximum profit.

INCREASE EFFICIENCY

Run fans, dryers and heaters only when productive air is present; save on runtime costs.

PRESERVE QUALITY

Proven to achieve target moisture levels, and preserve protein, oil and starch contents.

MONITOR 24/7

No more worrying about what is going on in your bins; the system sends alerts directly to you when there is a problem.

INCREASE SAFETY

No need to climb the bin at any time; data is captured and reported directly to you.

PROPER HYDRATION WITH CONDITIONED SOYBEANS

Increase profits with well-conditioned soybeans that meets precise moisture targets. Ensure your soybeans are always delivered in peak condition.

All too often, soybeans are loaded into the grain bin already over-dried and face the risk of becoming even drier during storage. AGI BinManager has the unique ability to rehydrate the beans and bring them to a profitable targeted moisture content. And that means more weight, more profit and a higher return on investment for your farm.

AGI BinManager measures moisture and temperature throughout the bin and analyzes the data against the conditions of outside air and air in the plenum. Based on the data captured, the system runs only when productive air is present - saving on runtime expenses and conditioning soybeans to capture premiums.

24-HOUR CUSTOMER SERVICE

We are an extension of your farm, here to help you at every turn. Dedicated customer support representatives are available to help make increased value and profit a reality of your operation.

We provide:

- On-site consultation and support
- 24/7 customer support by phone
- Customized solutions to meet the needs of your commodity and your operation
- Safe, secure AGI SureTrack™ account, customized to your operation

WORKING TO INCREASE
THE VALUE AND PROFITS
OF YOUR FARM

AGI BinManager, AGI SureTrack, IntelliFarms, AGI and the furrows symbol are trademarks belonging to Ag Growth International Inc.

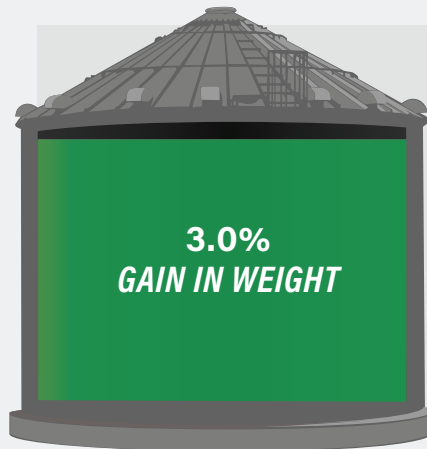

Minimize loss & energy costs

Over-drying and spoilage in your bin can eat away at your bottom line. On top of that, high energy bills from inefficient running of fans adds to the expense. AGI BinManager's ability to reach targeted moisture content rehydrates soybeans with precision, and only calls for the bin's fans and hearts to run when productive air is present.
